Subject: TSE/BSE Statement

Dear Valued Customer,

The neurodegenerative diseases, Transmissible Spongiform Encephalopathy (TSE) and Bovine Spongiform Encephalopathy (BSE), have recently become a major concern. AP Tech has reviewed its products in regards to TSE/BSE and the potential risk level.

AP Tech regulators, valves, and flow devices are manufactured from metals and synthetic materials, and they do not contain any animal products or biological materials. Furthermore, the raw materials used in AP Tech products are not derived from TSE/BSE risk materials as identified in the European Commission Decision 97/534/EC.

During the assembly and testing process, AP Tech products do not come in contact with any animal products. The final AP Tech product is sealed in polyethylene bags and does not contact any substances of animal origin during storage and transportation. Therefore, there is a negligible risk of TSE/BSE in AP Tech products.

Sincerely,

A handwritten signature in black ink, appearing to read 'Tom Vreeland', with a large, sweeping flourish at the end.

Tom Vreeland  
Vice President of Sales
