Subject: RoHS (Restriction of Hazardous Substances)

Dear Valued Customer:

AP Tech has reviewed the EU Directive 2011/65/EU with amendment 2015/863/EU. This is commonly known as RoHS (Restriction of Hazardous Substances).

The brass C36000 and Aluminum-Silicon-Bronze UNS C64200 material used in the AP Tech products do contain lead (up to 4%). The lead is used as an alloying element, and it does not present a hazard under normal handling or use. No other restricted chemicals or substances have been found. The composition of the materials has been determined via material certificates of purchased parts and official declarations of RoHS compliance by our suppliers. The information used for this investigation is considered reliable to the best of our knowledge. Therefore, AP Tech products are considered compliant with the EU RoHS Directive with exemptions for lead in copper parts.

Sincerely,

A handwritten signature in black ink that reads 'Huy Lam'.
